

Accelerating the Monthly Close with Agentic Controllership

Transforming Financial Governance from a System of Record to an Engine of Insight

Modernizing the 5-Stage Close

Transitioning from manual data aggregation to an AI-assisted pipeline. Shifting the workflow from Days -5 to +7 into a compounding value-creation engine.

Elevating the Controller

Eliminating extraneous cognitive load. Refocusing human capital exclusively on strategic action, hypothesis testing, and risk mitigation.

Unimpeachable Validation

Flawless execution governed by Human-in-the-Loop (HITL) checkpoints. Proven, audit-ready performance against rigorous enterprise standards.

The Evolution of Controllership

The Traditional Controller (System of Record)

- **Workflow:** 
ERP/Excel Data -> Validation -> Close -> Static Report
- **Output Focus:** Variance observation.
- **Cognitive Burden:** High extraneous load spent formatting and reconciling.

Example Output:
"We are NOK 4.2m over budget."

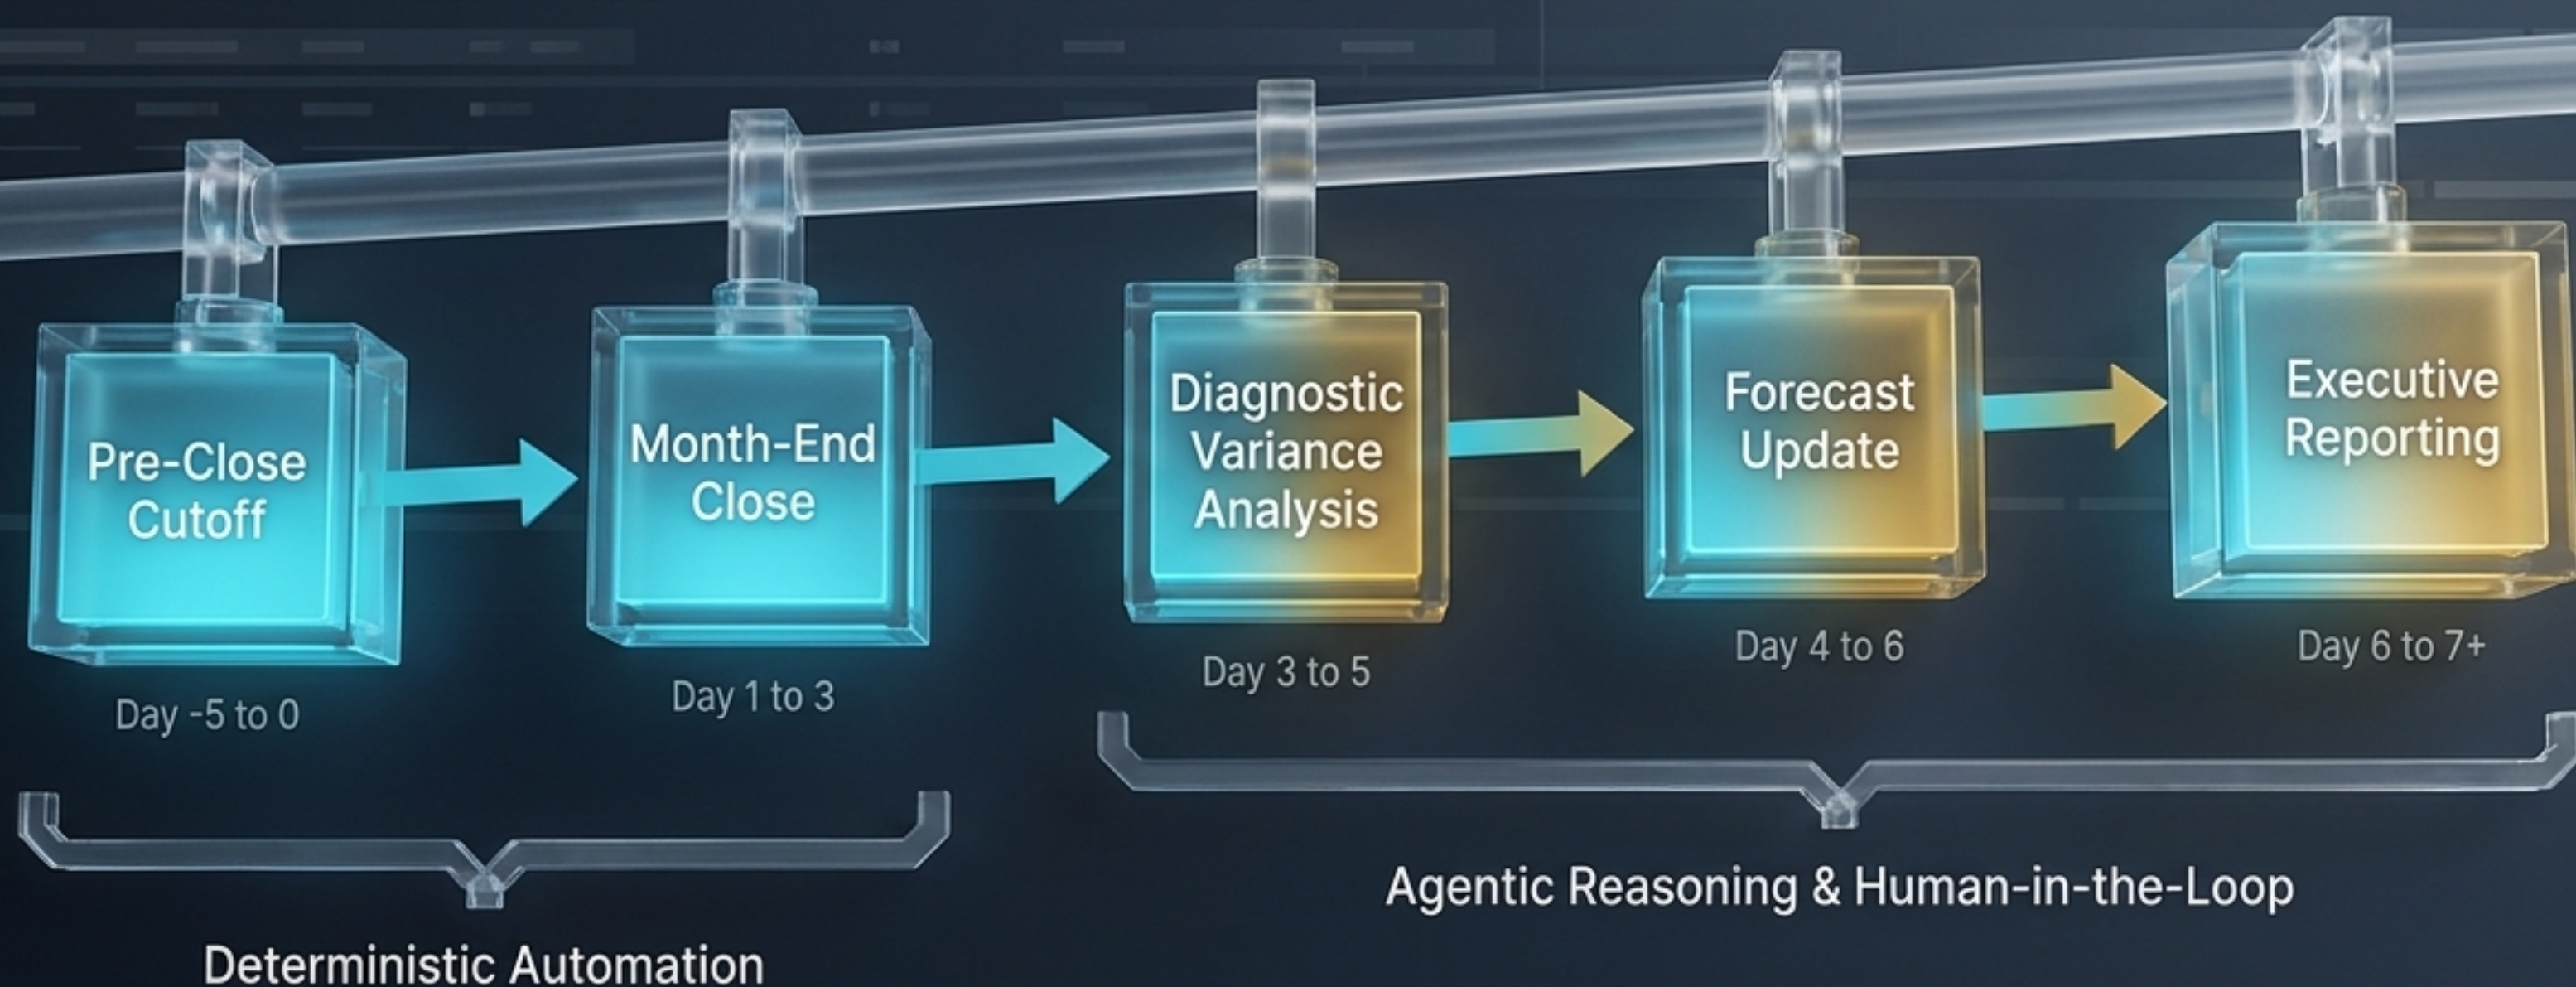

The Agentic Controller (System of Action)

- **Workflow:** 
Driver Analysis -> Forecast Impact -> Action Formulation
- **Output Focus:** Root-cause investigation and recovery.
- **Cognitive Focus:** High germane load dedicated to strategic decision-making.

Example Output:

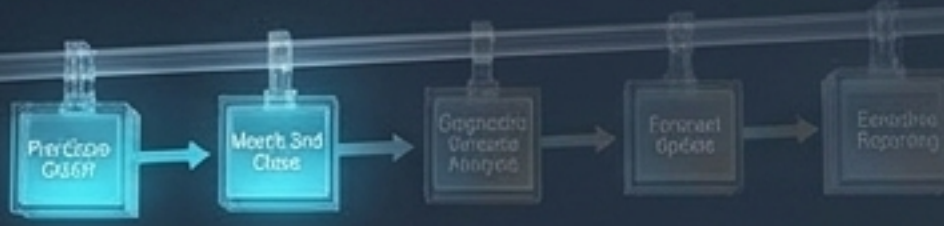

"NOK 4.2m adverse, primarily driven by subcontractor costs. NOK 1.5m is timing-related, while NOK 2.7m impacts the EAC. Recovery actions are evaluated and initiated."

The Insight Escalator: Refining Raw ERP Data into Executive Action

Cyan = Workflow Engine / Agent Processing

Gold = Human Strategic Control

Foundational Quality Control.

The system operates on deterministic workflows for known steps—cleaning, standardizing, and unifying the data architecture before any agentic reasoning is permitted to begin.

Deterministic Control

Confirm reporting calendars and cut-offs.

Extract ERP data and check missing supplier invoices.

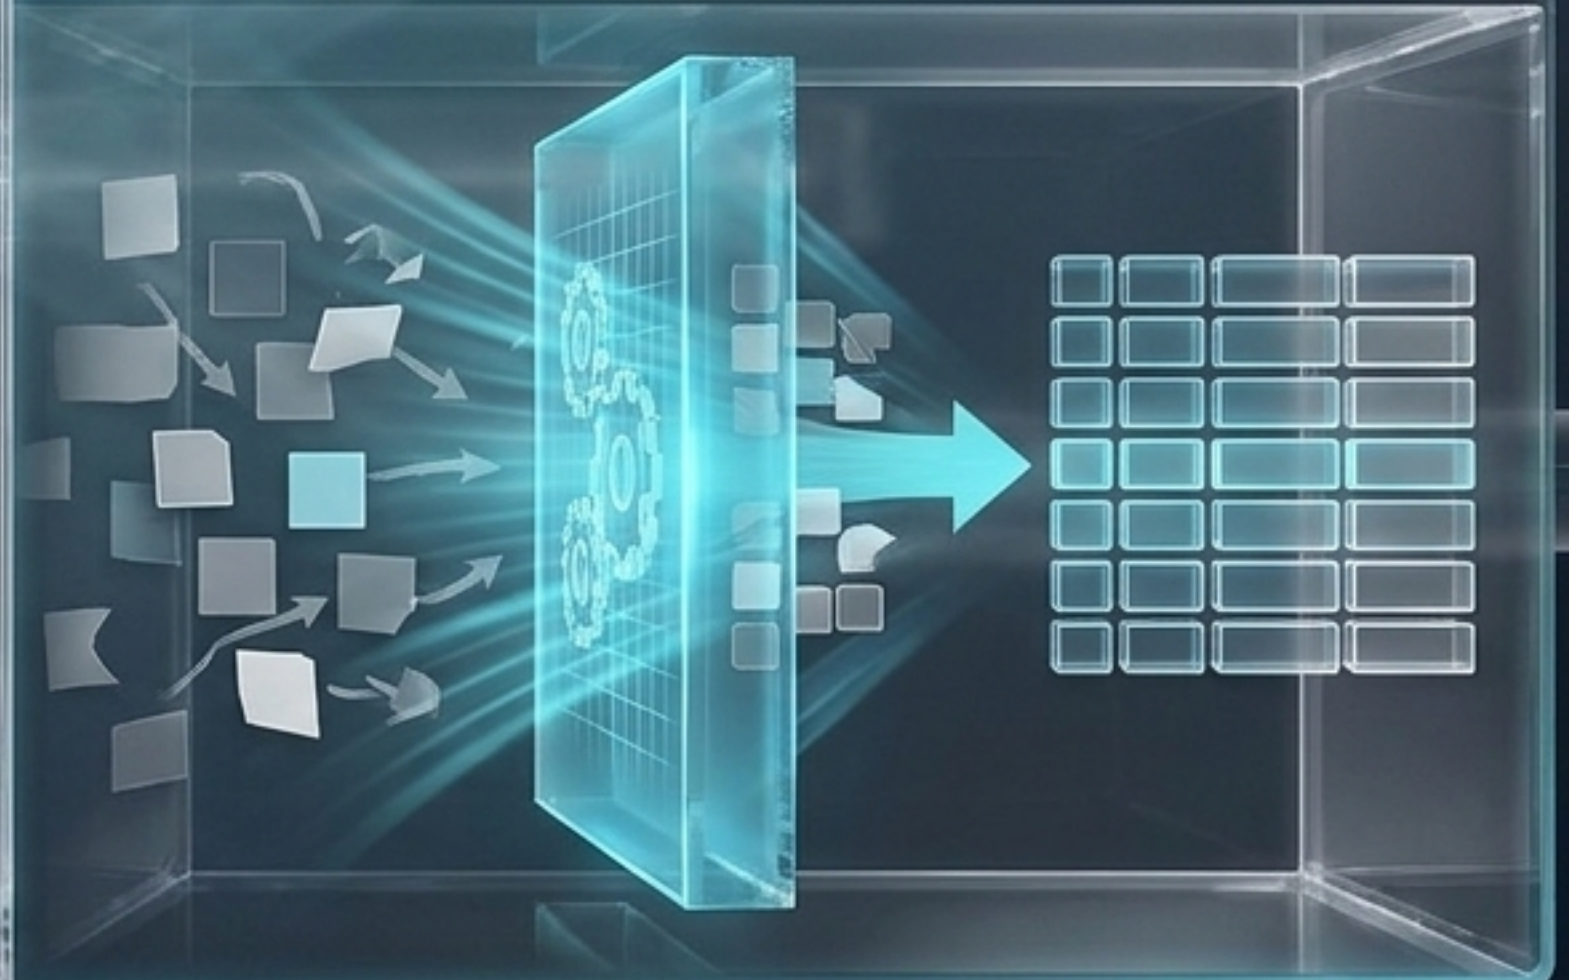

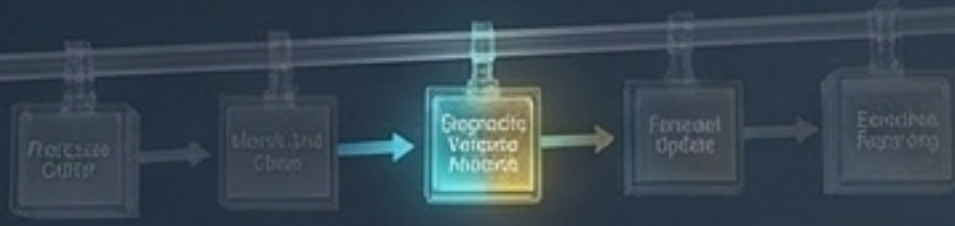

Review open purchase orders and unbilled WIP.

Reconcile balance-sheet and intercompany accounts.

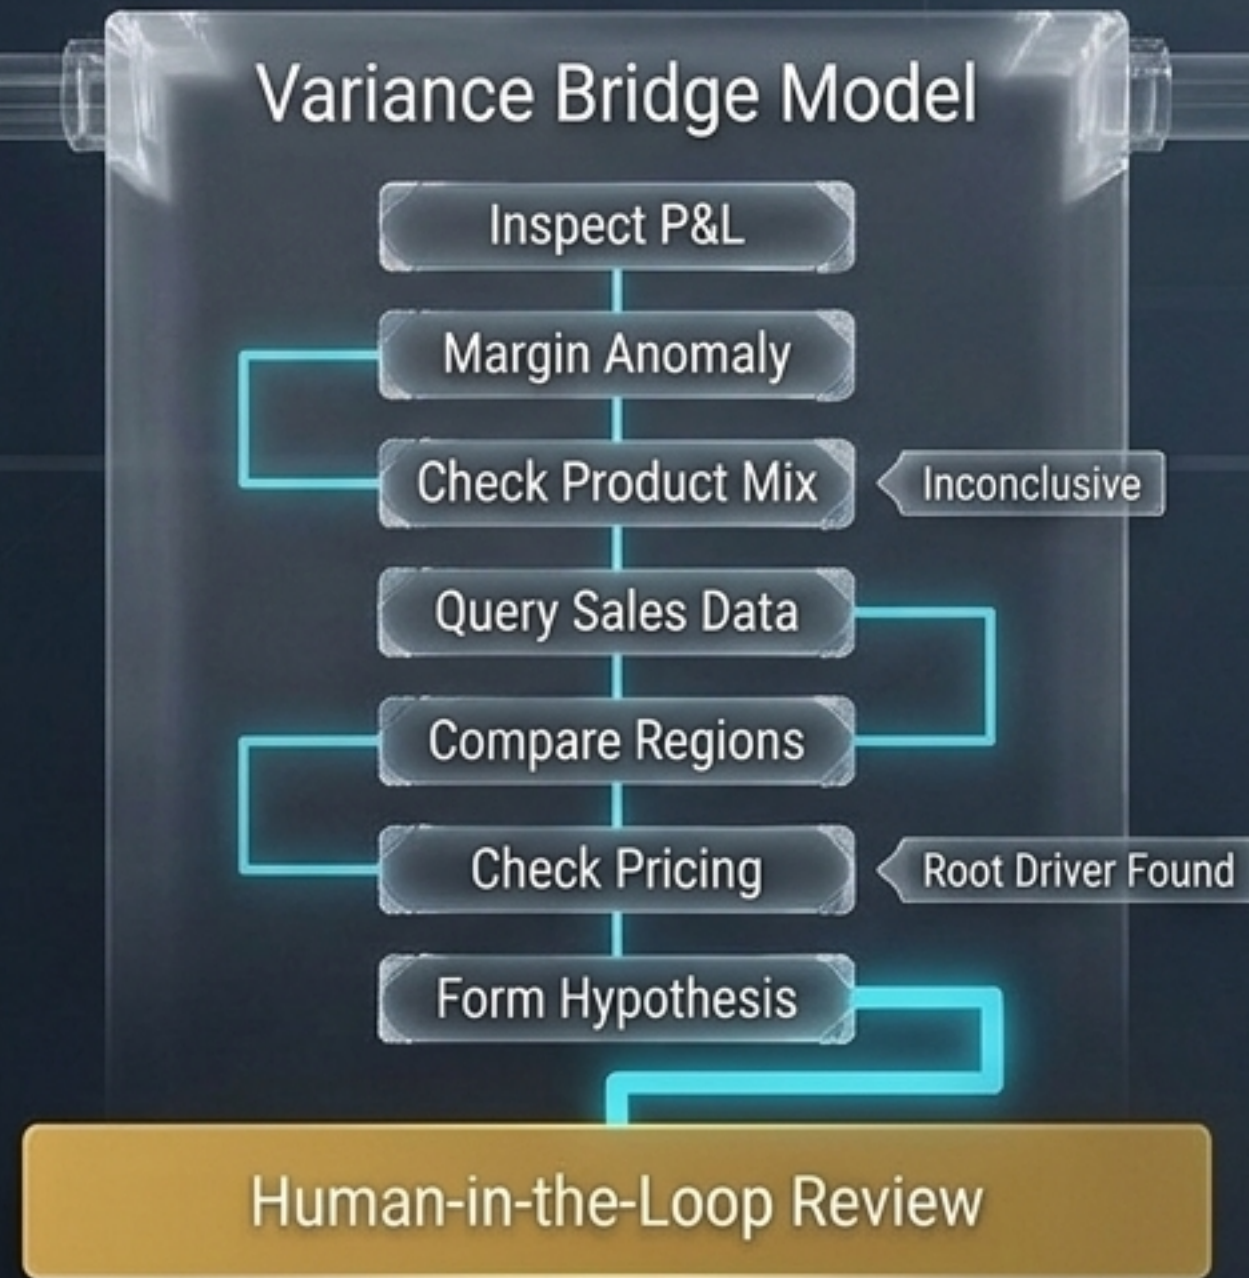

The Data Refinery

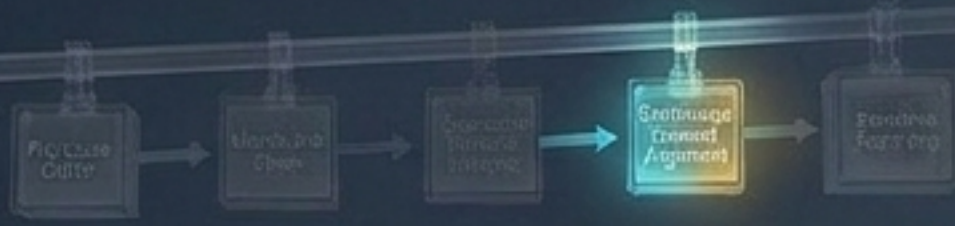

Autonomous Investigation, Human Validation.

The agentic workflow navigates complex data relationships independently, escalating to the controller only when a substantiated hypothesis is ready for strategic review.

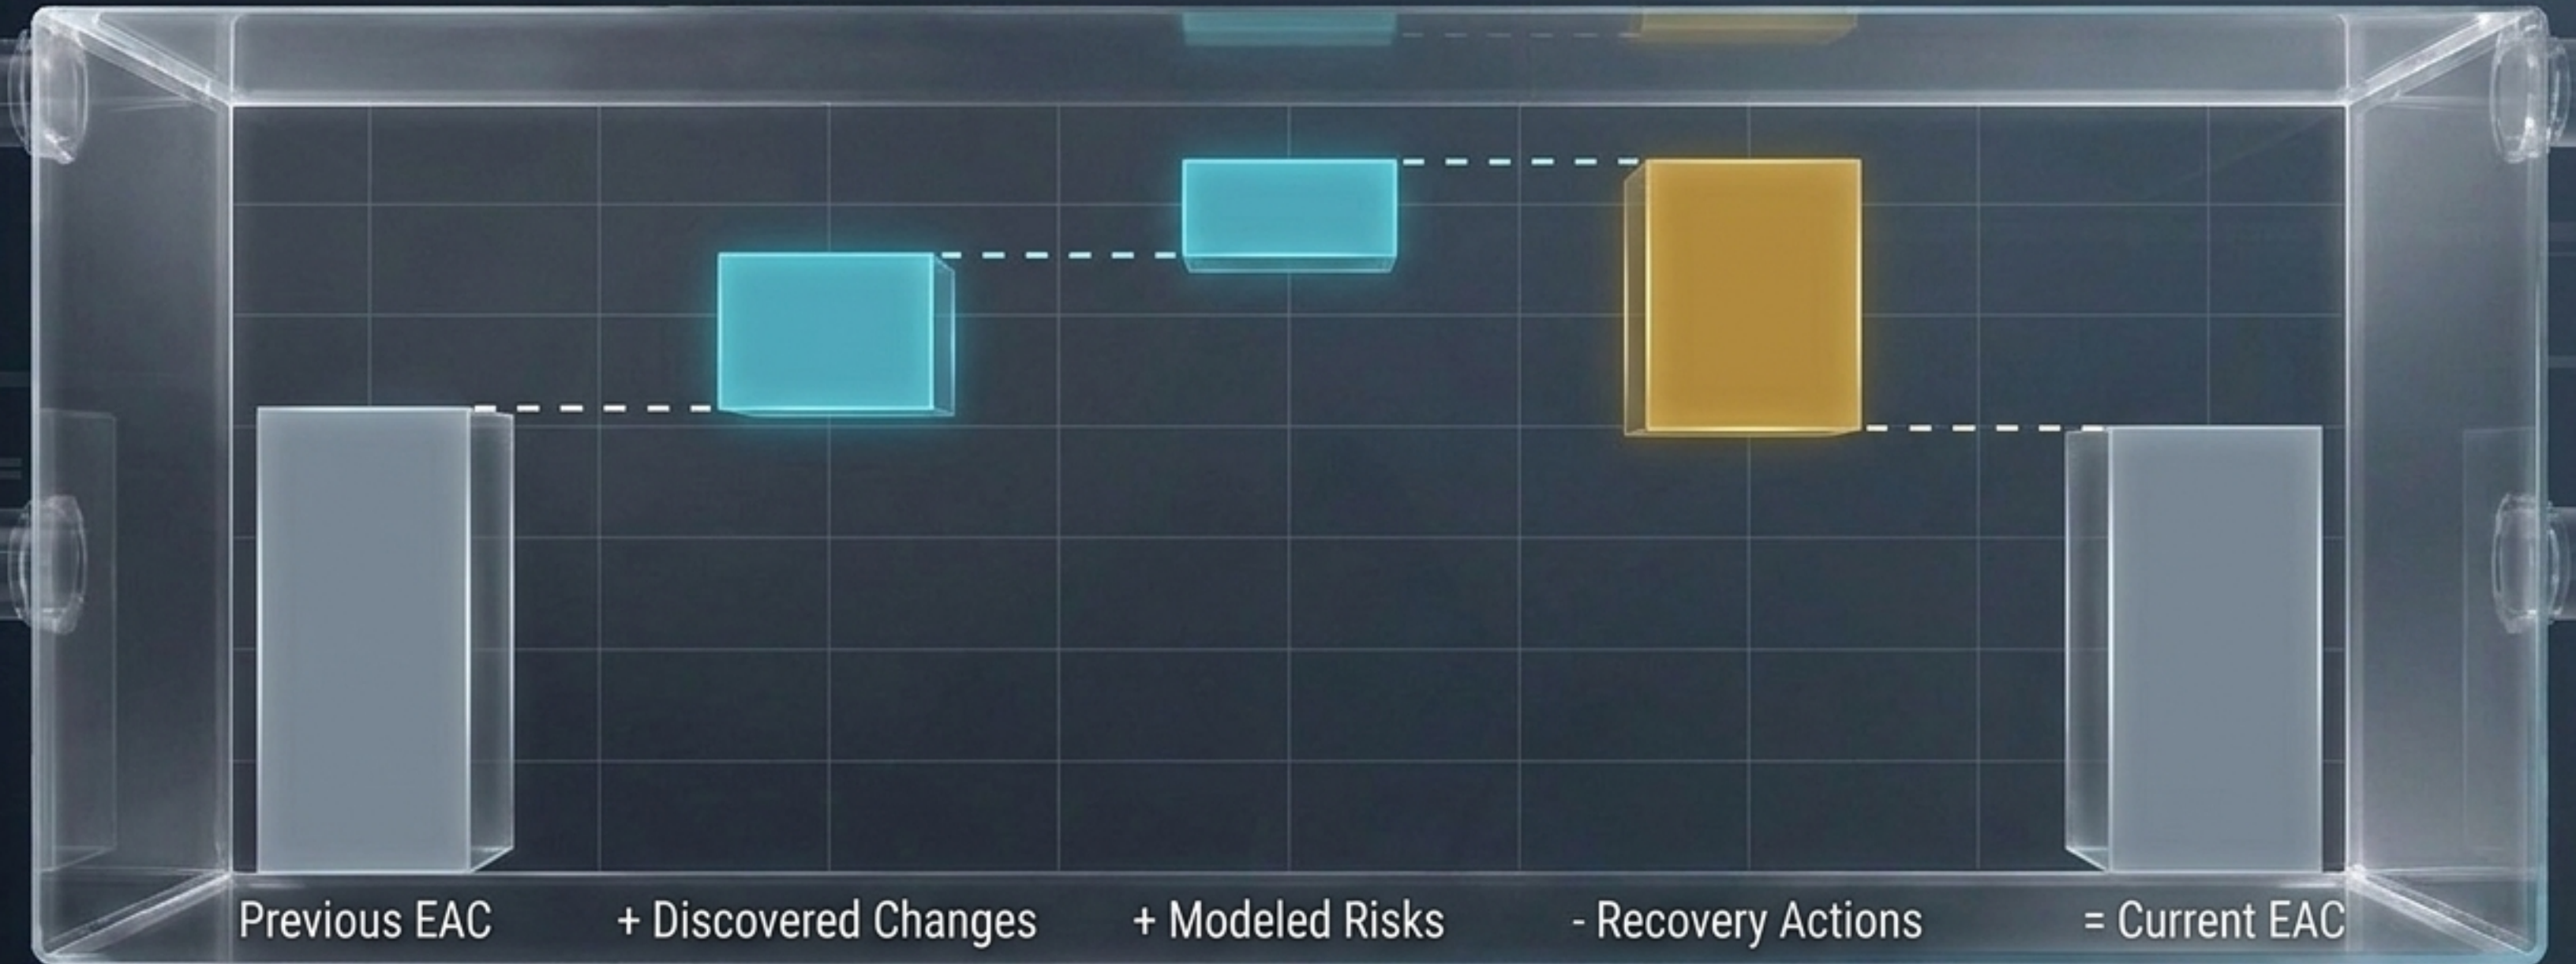

Cyan = Workflow Engine / Agent Processing 
Gold = Human Strategic Control 

Continuous Forward Alignment.

Instantly updating cash-flow models and assessing remaining contingencies by integrating real-time variance discoveries with strategic recovery actions.

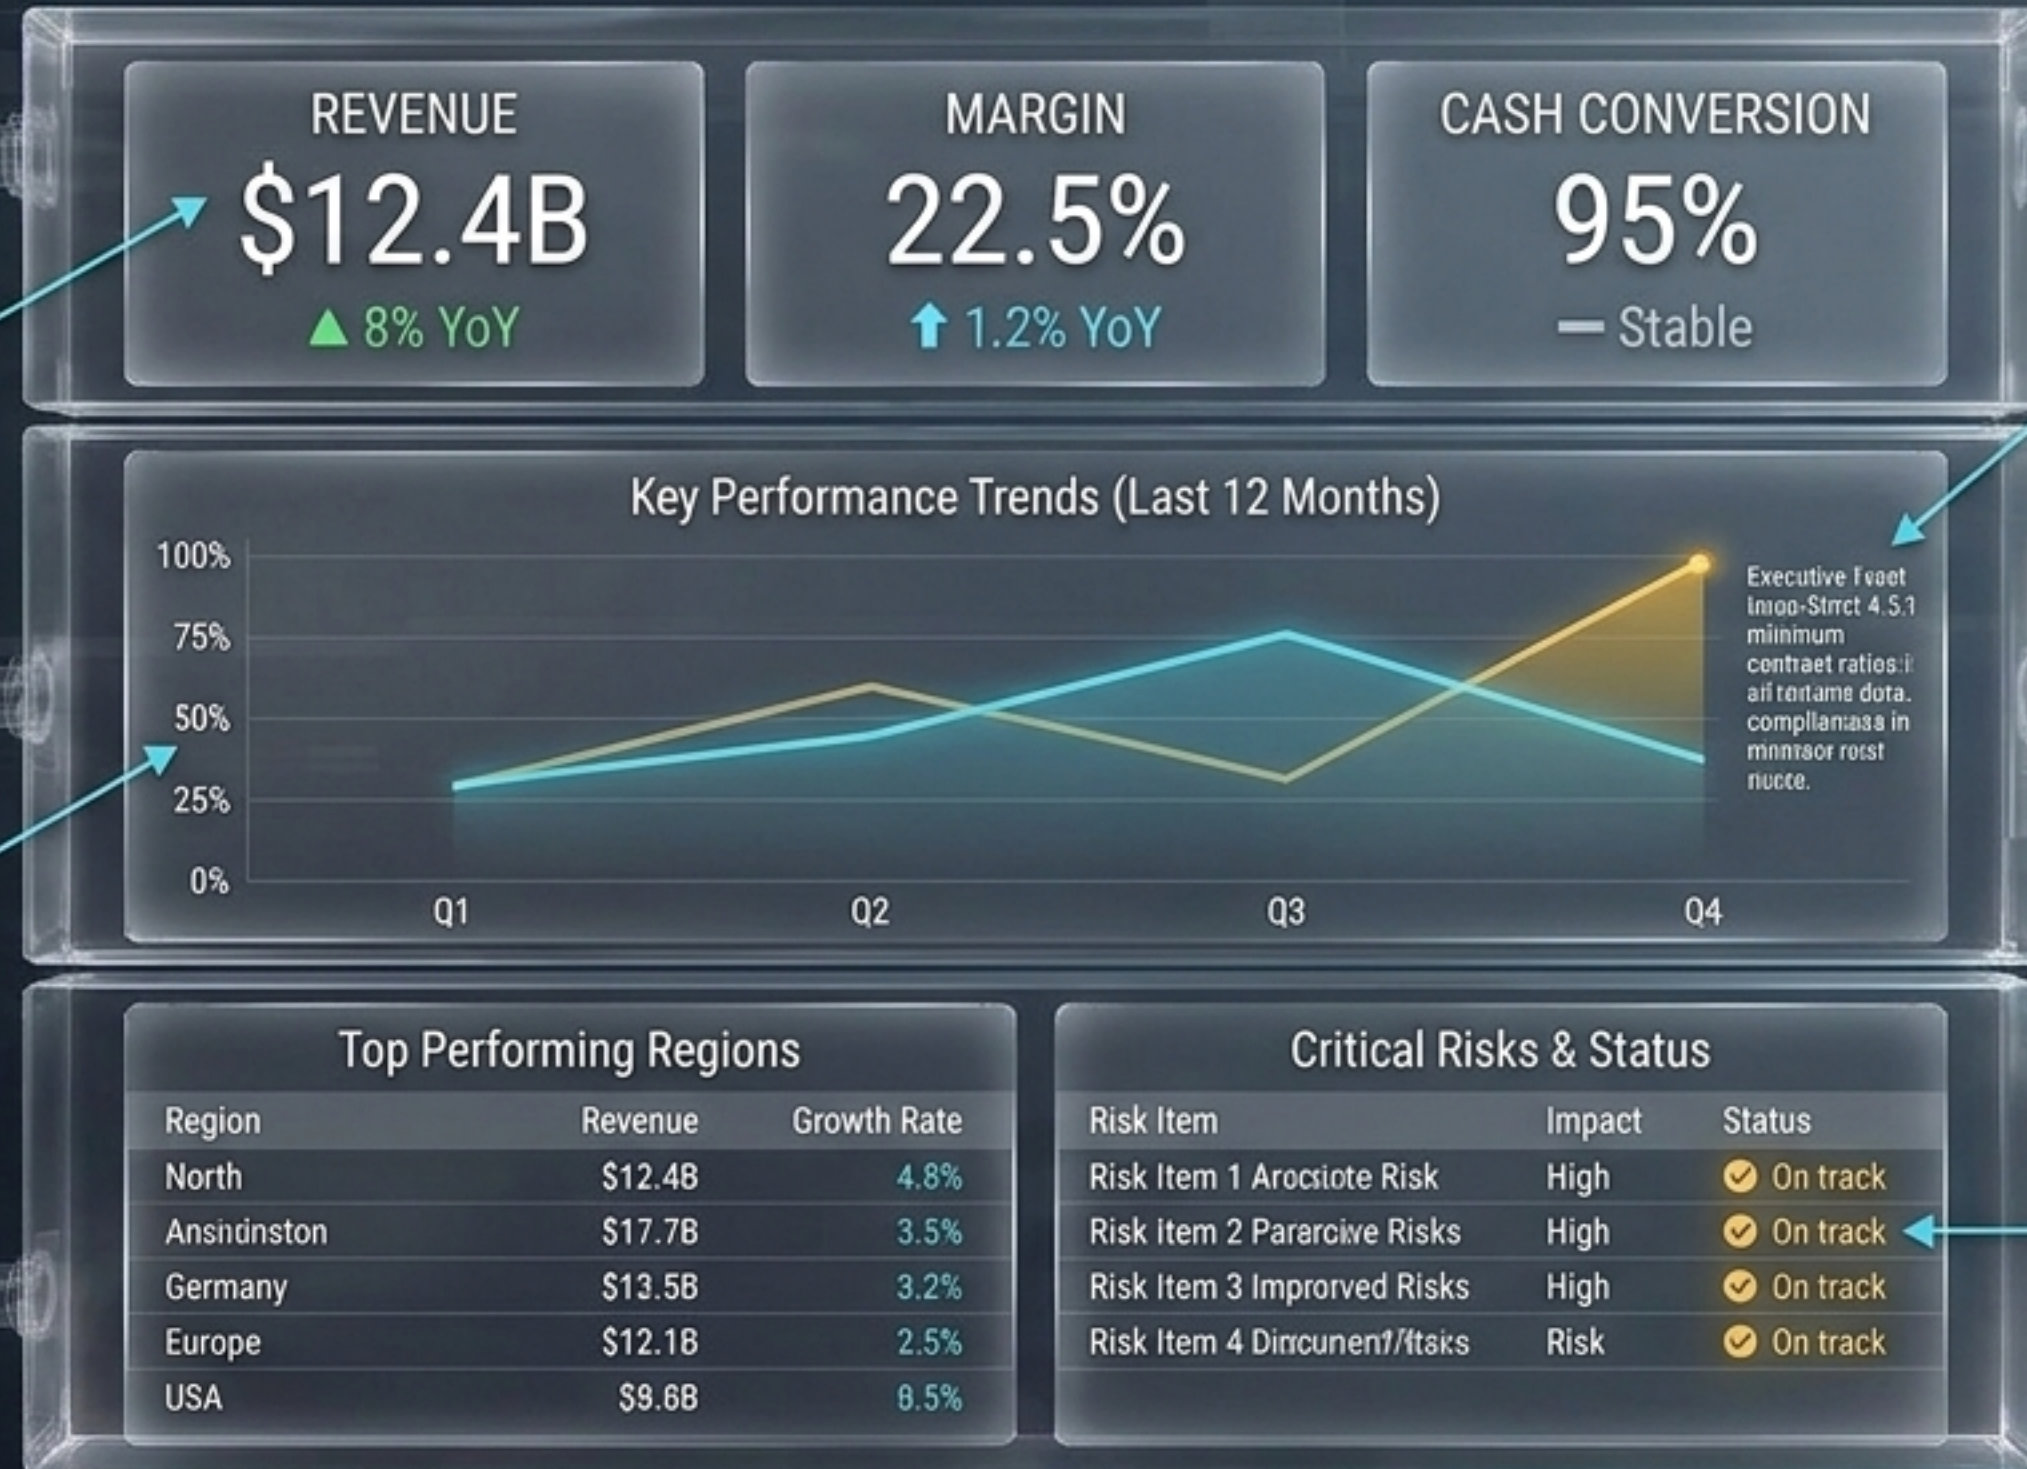

Optimal Executive dashboard layout.

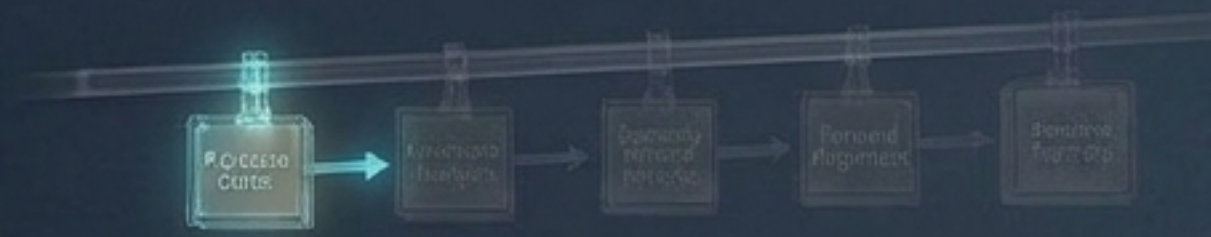

Cognitive Flow: F-pattern layout ensures executives see the most critical KPIs first.

Data Accuracy over Aesthetics: No 3D distortions or overcrowded pie charts.

WCAG 2AA Compliance: Strict 4.5:1 minimum contrast ratios for all text data.

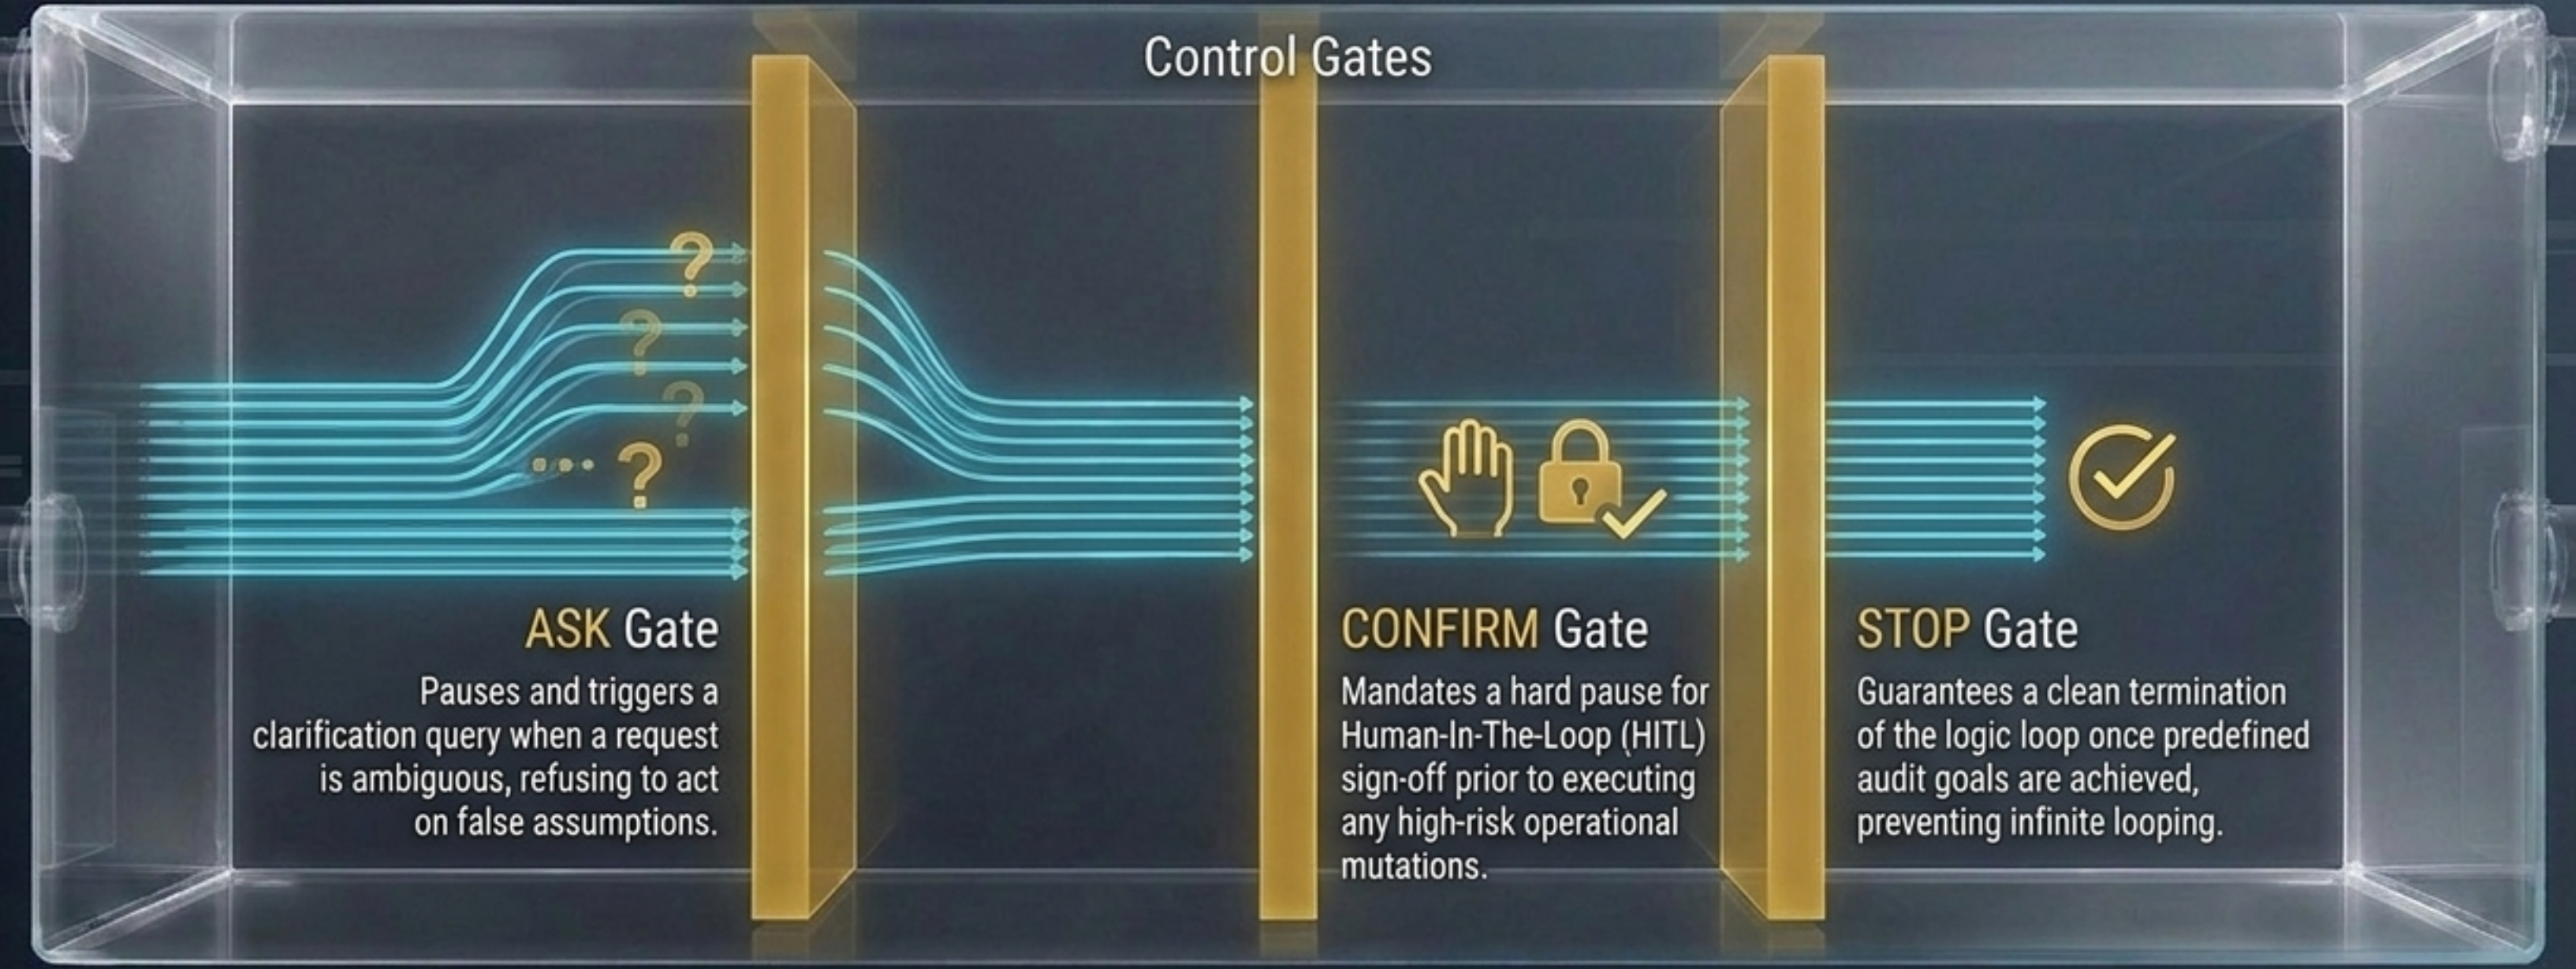

Universal Accessibility: Status indicators never rely on color alone. Paired with contextual text labels (e.g., 'On track', 'At risk').

Absolute Financial Governance.

The workflow owns the business process. The agent owns bounded reasoning.
The human owns the decisions.

Test Case 05 (TC-05)

End-to-End Executive Close & Reporting Benchmark

Composite Score: 100 / 100

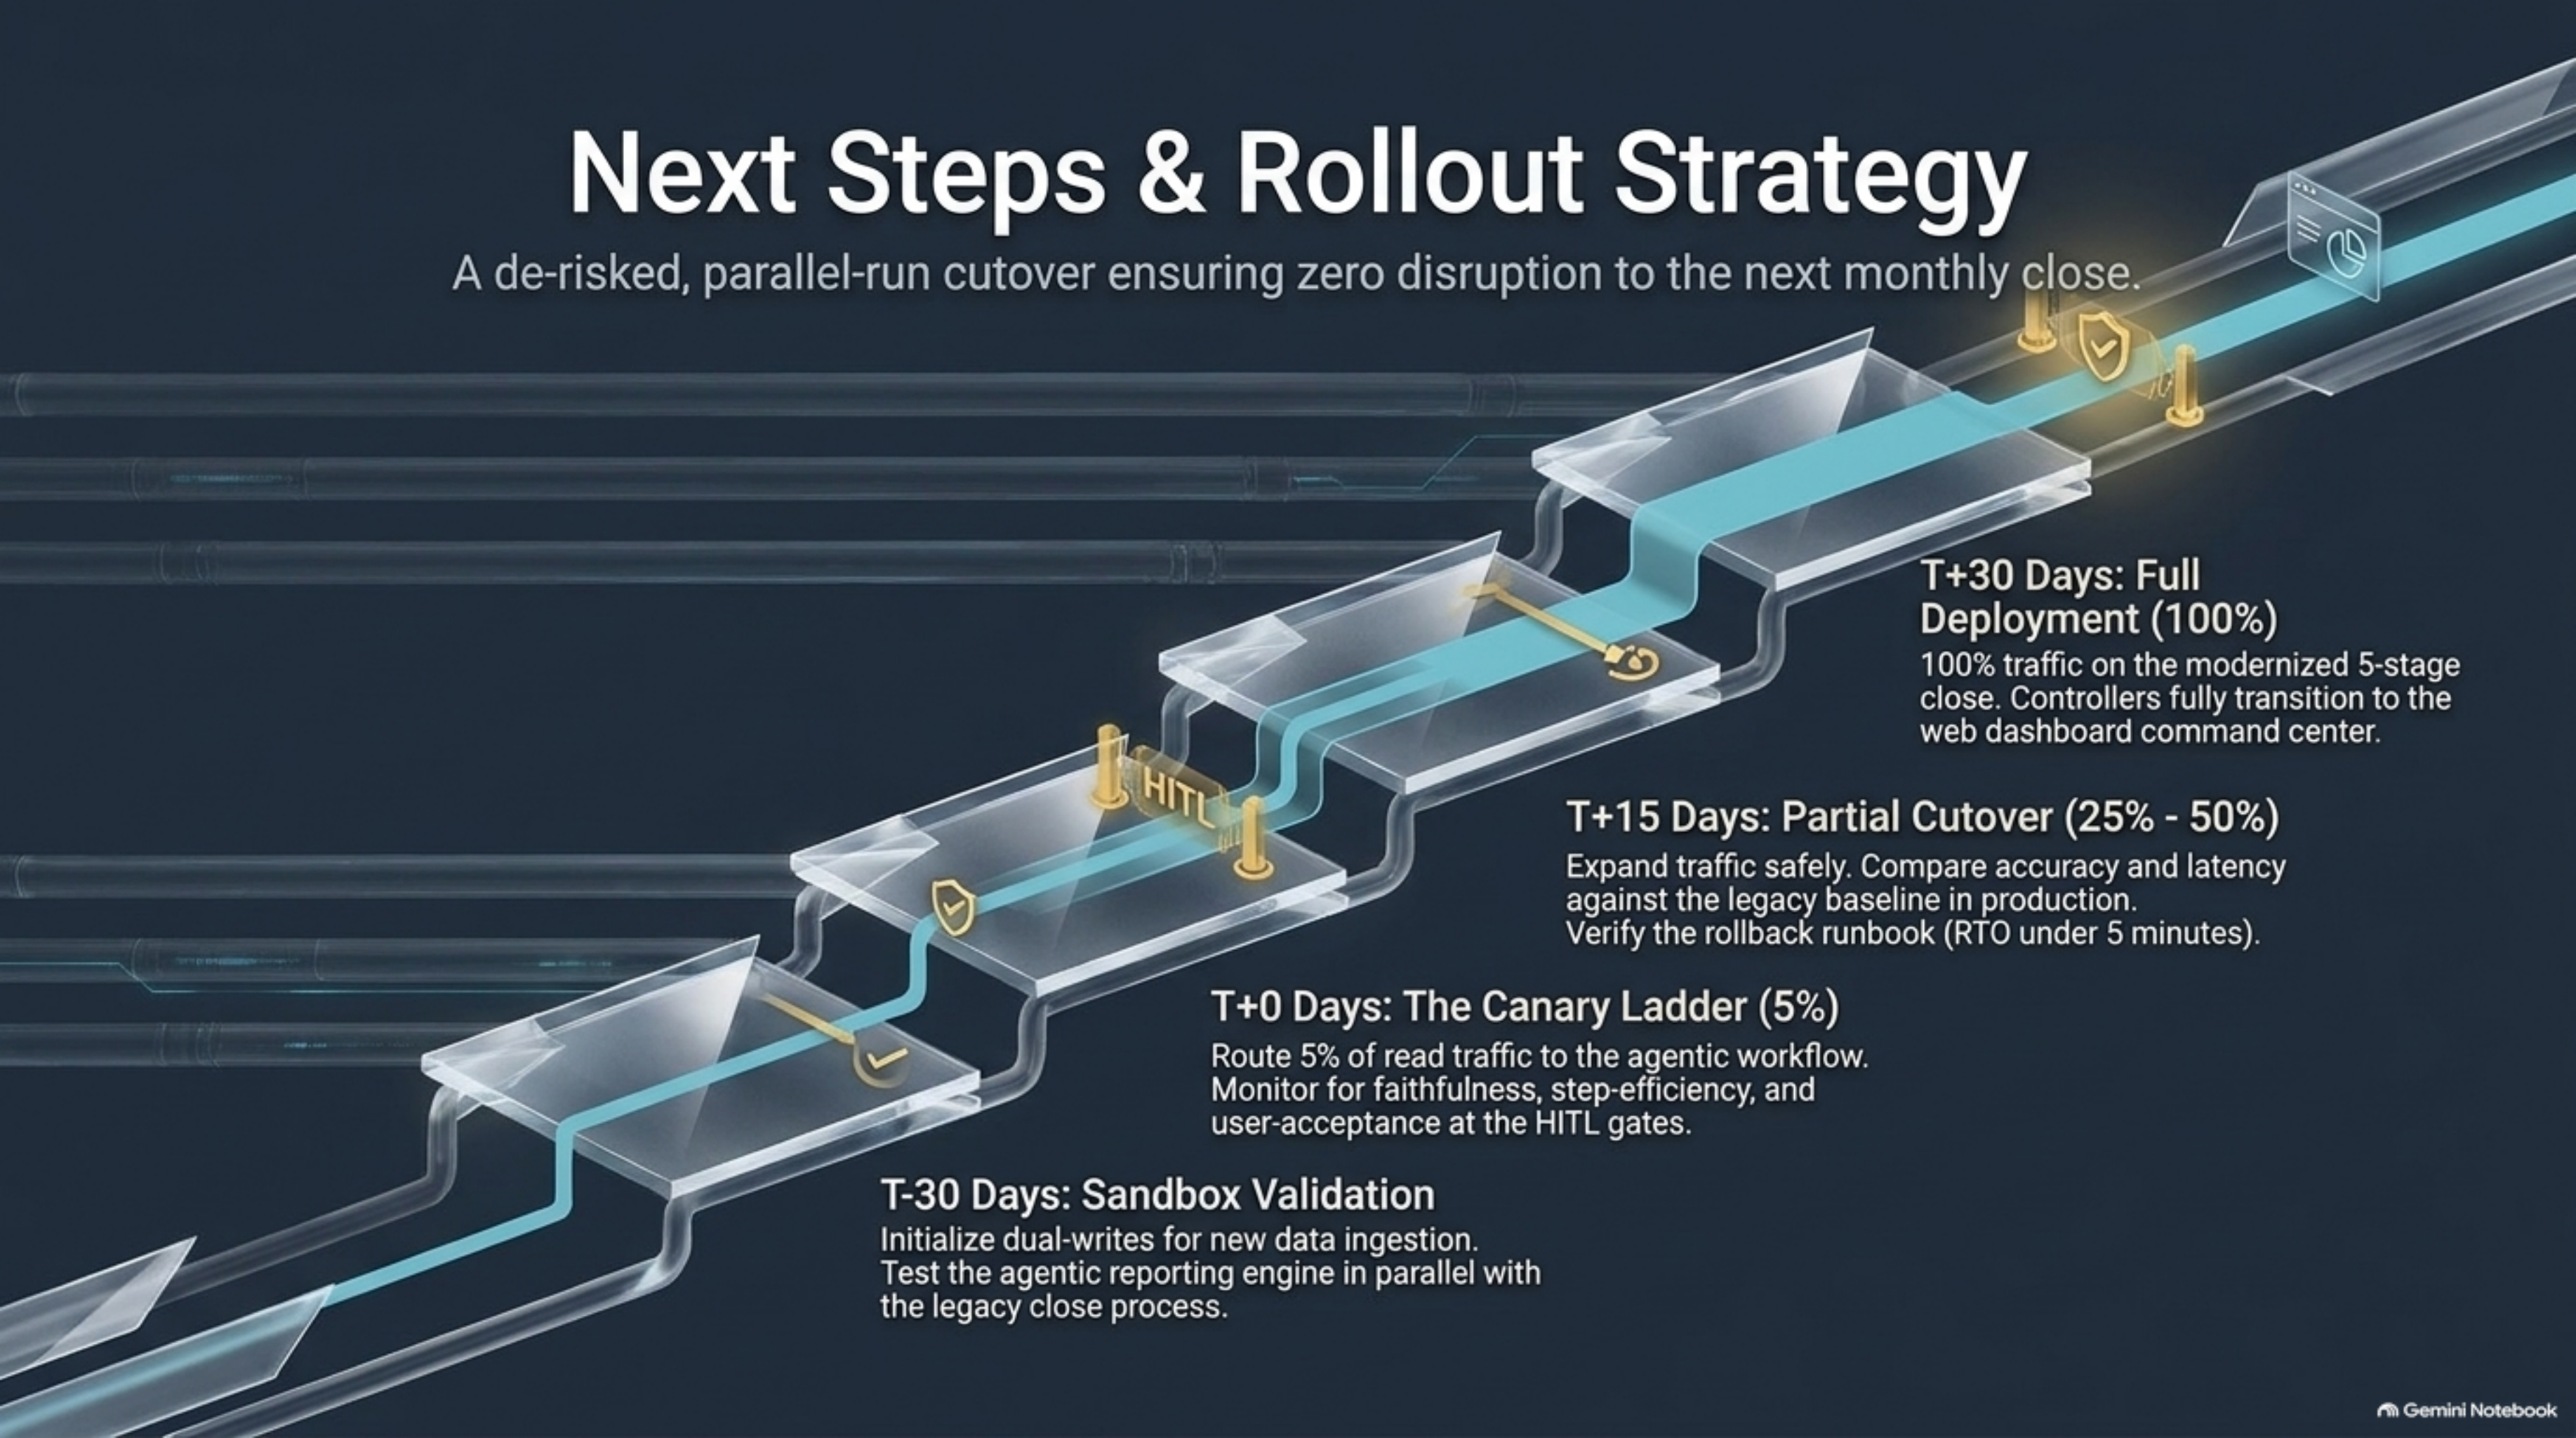

Rigorously evaluated against the Multi-Step Planning & Trajectory Harness (v1.0). An ideal pass demonstrating optimal path execution, perfect control calibration, and zero policy breaches.

TC-05 Diagnostic Scorecard

Benchmark Criteria	Score	Business Value
Control Gate Calibration	25/25	Flawless Ask/Confirm/Stop execution. No assumed parameters; perfect HITL sign-off routing.
Trajectory & Step Efficiency	25/25	Optimal Path Optimization Ratio. Zero redundant loops; maximum speed to insight.
Safety & HITL Policy	20/20	Absolute Financial Governance. Strict adherence to SELECT-only SQL queries and full approval compliance.
Error Recovery & Resilience	15/15	Unbreakable Operations. Successfully recovers from underlying API or schema changes without workflow failure.
Cost & Deliberation Economics	15/15	ROI & Scalability. Exceptionally low planning latency and highly efficient token usage.

Next Steps & Rollout Strategy

A de-risked, parallel-run cutover ensuring zero disruption to the next monthly close.

T+30 Days: Full Deployment (100%)

100% traffic on the modernized 5-stage close. Controllers fully transition to the web dashboard command center.

T+15 Days: Partial Cutover (25% - 50%)

Expand traffic safely. Compare accuracy and latency against the legacy baseline in production. Verify the rollback runbook (RTO under 5 minutes).

T+0 Days: The Canary Ladder (5%)

Route 5% of read traffic to the agentic workflow. Monitor for faithfulness, step-efficiency, and user-acceptance at the HITL gates.

T-30 Days: Sandbox Validation

Initialize dual-writes for new data ingestion. Test the agentic reporting engine in parallel with the legacy close process.
